

WHAT DOES **AUTO-DIALING** MEAN FOR YOUR **PATIENT COLLECTIONS**?

Most practices are suffering the effects of the 10/10/10 rule.

10%

10% of calls connect with a person

10%

Only 10% of those will be the intended recipient, and

10%

Even then only 10% are willing to make a payment

Enter the robots.

With an auto-dialing solution, practices can reallocate in-house resources dedicated for patient account resolution phone calls and improve the results exponentially **based on sheer volume of calls**.

After making 400,000 outbound calls, **MedEvolve's auto-dialing solution achieved excellent results** collecting on balances that would have otherwise remained outstanding if handled with manual phone calls:

10%

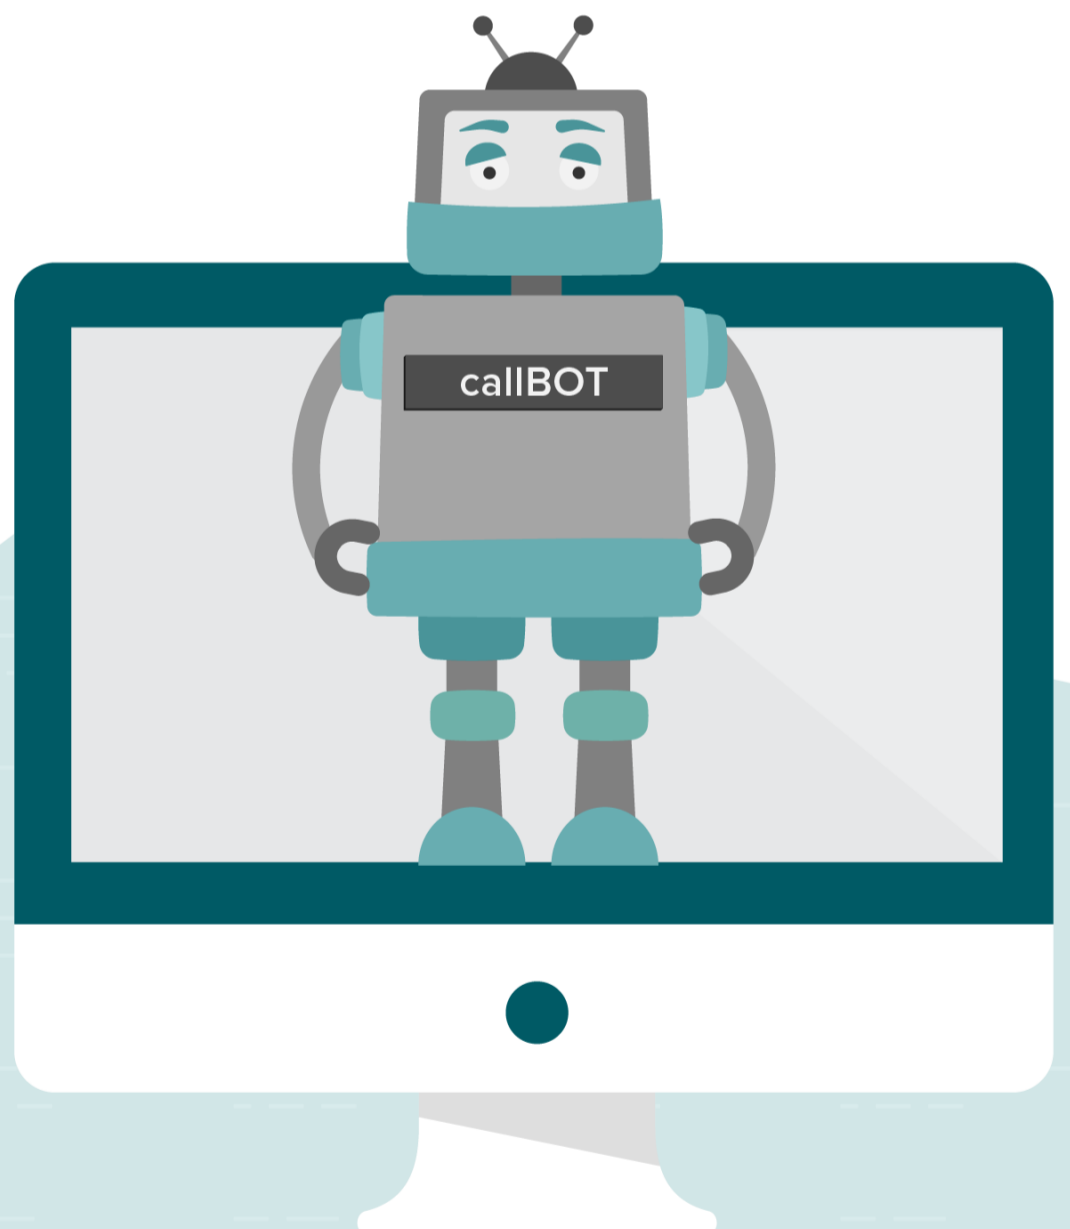

Still 10 percent of calls connected

\$43

Average of \$43 collected from each transaction

17%

17 percent of aging patient accounts balances collected

Ready to let the robocalls take over? MedEvolve's Patient Account Resolution Services can handle patient collections so your office staff can focus their energies elsewhere.
